MMC is a Maritime Industrial area organize to host international companies specialized in the maritime industry.

Those industries are from a different sectors of the Maritime Industries. From Factories for export, International shipyard, dredging companies, International suppliers and direct services for large vessels. Including the management services and of ship-repair, conversion and new constructions

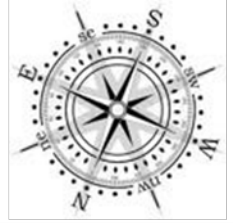

Combined experience of thousands of vessels attended in the technical management for almost eight decades in several shipyards in Europe, America and Caribbean regions

MMC is proud to be able to present to the international Maritime Community specialized solutions to several challenges in your vessels as: safety supplies, mechanical services, training, new constructions and conversions true our partners and affiliates:

- A.F. Theriault (Canada)
- BIMCO (Canada)
- Metal America (Dominican Republic)
- Marine Consultants (Trinidad)
- MSC Panama (Panama)
- Edgewater (USA)

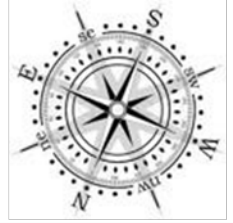

Workers careers plan:

MMC collaborates with local Universities and Technical schools as a channel to improve the Technical Knowledge of their staff, by means of apprenticeships agreements, continued formation and certification courses and trainings. 80% of workers are local and are trained following a strict workers development and career plan.

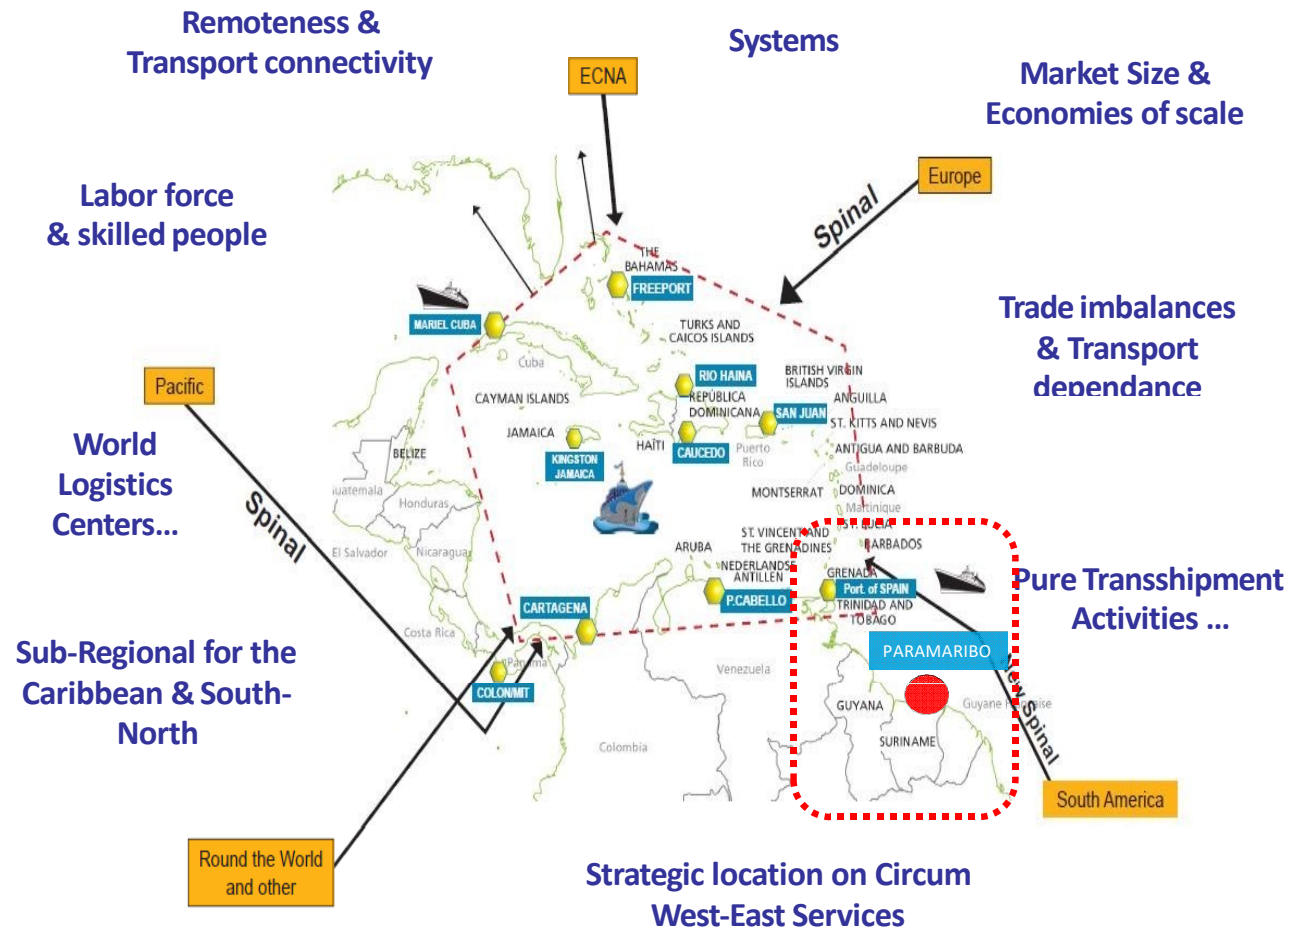

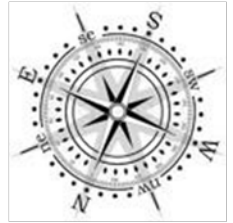

Each worker is considered as future technician specialized in his field. Reason why each new unexperienced worker is contracted as an apprentice for 1 year. During this period the apprentice is evaluated by his supervisor. In case that the apprentice demonstrate enough qualities and ethical values is promoted to worker level A where will start with some little works under supervision.

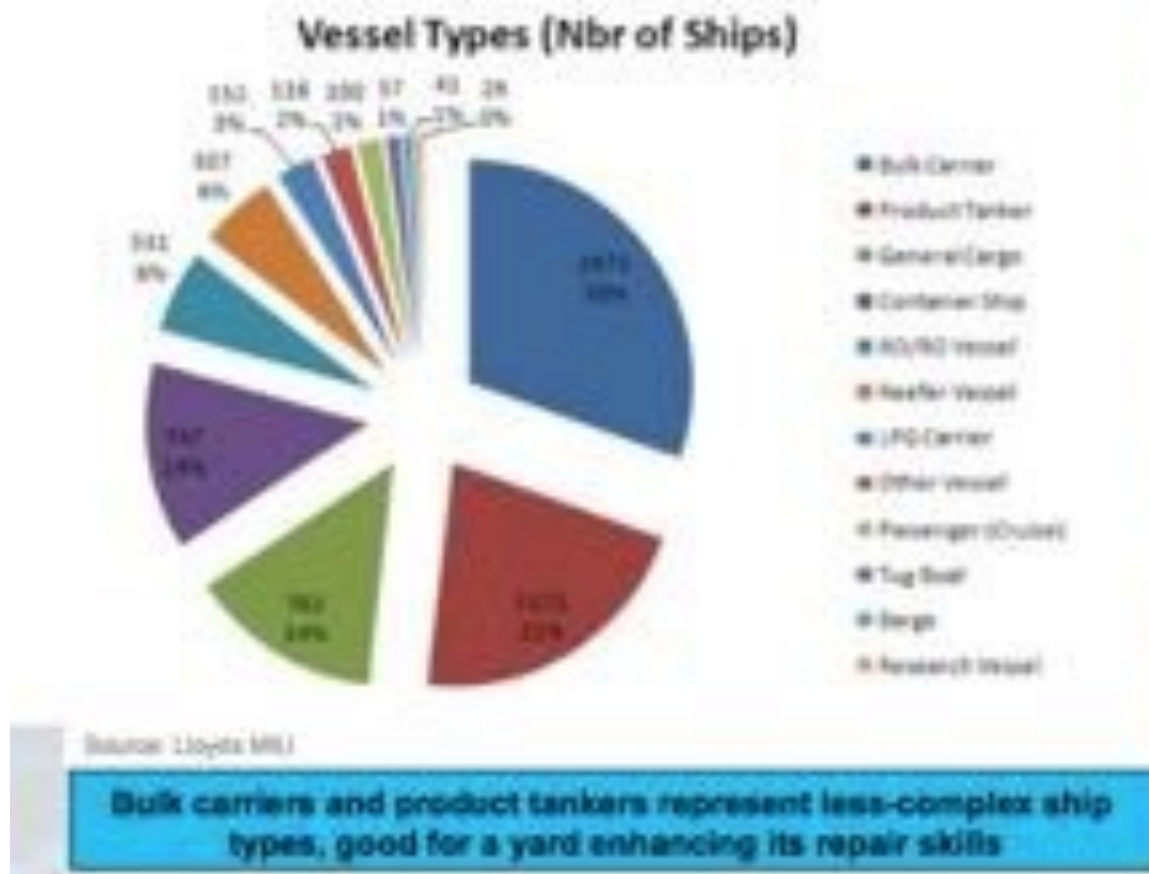

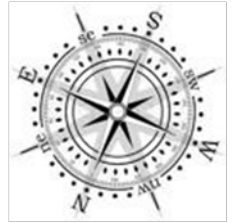

At the moment is being organize with Armada of Dominican Republic and Intec University a Naval Engineering degree and marine workers. This will impact to more than 5,000 world wide level technical
